PHILOSOPHY OF UTM

The divine law of Allah is the foundation of knowledge. In line with His Will, UTM strives with total commitment to attain excellence in science, technology and engineering for the well-being and prosperity of mankind

Motto of UTM

In the Name of God for Mankind

Vision of UTM

A Premier University Providing World-Class Education and Research

Mission of UTM

To Develop Holistic Talents and Prosper Lives Through Knowledge and Innovative Technologies

UTM Educational Goals

UTM's Educational Goals are based on:

UTM Vision and Mission and four (4) core values of UTM (Integrity, Synergy, Excellence, Sustainability - ISES)

Malaysian Qualification Framework (MQF) 2.0

UTM Graduate Attributes

21st Century Education Framework

UTM's Educational Goals are:

1. Demonstrate knowledge and competency in various field of study, appropriate research and professional practices, and the processes of critical thinking, creative thinking, and problem solving for universal well-being and prosperity.
2. Demonstrate high standard of ethical conduct, positive character, and societal responsibilities.
3. Appreciate and always be guided by the Universiti Teknologi Malaysia core values of Integrity, Synergy, Excellence and Sustainability.
4. Communicate and collaborate effectively with other professionals, and the society.
5. Demonstrate the ability to learn and grow professionally and further contribute to the development of science, technology and engineering

Vision
Mission
Strategic Objectives

VISION OF FAI

A world-class artificial intelligence faculty in transdisciplinary education, research and innovation.

MISSION OF FAI

To develop future oriented, industry-focused, and humanity-centered artificial intelligence talent in providing innovative solutions for societal well-being.

STRATEGIC OBJECTIVES OF FAI

1. To produce talent through innovative artificial intelligence education.
2. To provide innovative solutions through transdisciplinary research.
3. To support the industries in attaining high gains and high value in business.
4. To leverage humanity-centered artificial intelligence towards balanced economic advancement for societal well-being.

ABOUT UNIVERSITI TEKNOLOGI MALAYSIA (UTM)

Photography by Office of Strategy and Corporate Affairs

Universiti Teknologi Malaysia (UTM) is a leading innovation-driven entrepreneurial research university in engineering science and technology. It is located both in Kuala Lumpur, the capital city of Malaysia and Johor Bahru, the southern city in Iskandar Malaysia which is a vibrant economic corridor in the south of Peninsular Malaysia.

UTM Kuala Lumpur (UTMKL) is a graduate campus of Universiti Teknologi Malaysia (UTM) and is under the same corporate structure as its main campus in Johor Bahru, Johor. The current UTMKL which is located at the center of Kuala Lumpur city used to be the original campus of UTM on Lot 4582 Jalan Semarak, with an area of 47.56 acre. UTMKL is a semi-autonomous campus headed by a Pro-Vice-Chancellor and the whole structure is governed by the same Board of Directors under the same protocol of Chancellor and Pro-Chancellors. The administrative and academic support for UTMKL is provided by the major administrative offices such as Registrar Division, Bursary, Library, Office of Asset and Development, UTM Digital and Office of Strategy and Corporate Affairs.

UTMKL is in its own local community affiliated with UTM, offers leading-edge programmes at bachelor and graduate degree levels and provides services both locally and internationally. In the current academic session, the UTMKL is offering full-time undergraduate programmes and postgraduate programmes under its three major schools: Faculty of Artificial Intelligence (FAI), The Azman Hashim International Business School (AHIBS) and The Malaysia Japan International Institute of Technology (MJIIT). Some of these schools also offer part-time executive programmes for working professionals. In addition, part-time and modular programmes are run by UTMSPACE (The School for Professional and Continuing Education).

There are several centres of excellence in UTMKL which carry out research activities and also offer some academic programmes. Other major supporting units include the branch offices of Innovation & Commercialization Center (ICC), School for Graduate Studies (SPS) and UTM International. Their presence in the Campus would be supportive of the Campus key results areas and its strategic objectives.

UTMKL has developed a long-term plan to leverage on the full advantage of its location in the urban Kuala Lumpur, cultivating attractions and characteristics unavailable in the Main Campus. Its mission to showcase UTM in the fields of science and technology and offer cross-disciplinary programmes with international outlook and industry-driven, are its major endeavour which will qualify UTMKL as an international reference center for the global communities.

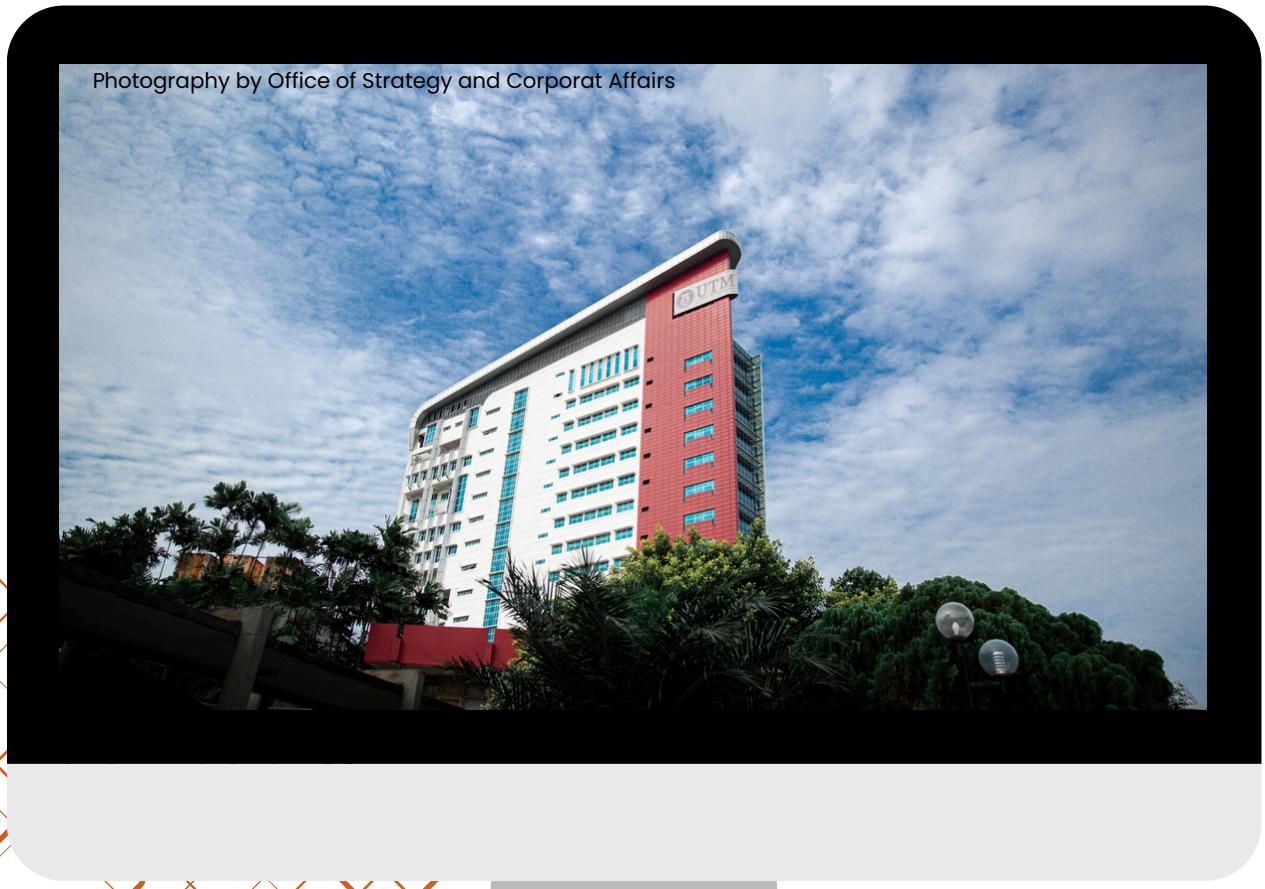
INTRODUCTION TO
FACULTY OF ARTIFICIAL INTELLIGENCE (FAI)

Photography by Office of Strategy and Corporat Affairs

Along with the rapid development of artificial intelligence (AI) in the world, Malaysia has taken proactive steps to establish the country's first Artificial Intelligence Study Center to empower the people's economy. "Innovation and digital talent need to be empowered, especially in the field of AI to improve the country's more sustainable economy", quotes from the Prime Minister of Malaysia during the presentation of Budget 2024 in the Dewan Rakyat on 13 October 2023 – (reference source: sinarharian.com.my). On 13 October 2023 the Prime Minister of Malaysia – YAB Dato' Seri Anwar bin Ibrahim has announced that UTM has been selected as a public university that will realize the nation's wishes. The announcement was made during the presentation of the Malaysia MADANI Budget 2024 themed MADANI Economy: Empowering the People.

Following the announcement, UTM through the Office of the Deputy Vice-Chancellor (Academic and International) has taken steps by holding the first phase AI Faculty Establishment Workshop on 17 to 18 October 2023. Through this workshop, UTM has agreed to establish the implementation process of re-purposing Razak Faculty of Technology and Informatics as the Faculty of Artificial Intelligence (FAI) starting on 31 October 2023 and is expected to complete its establishment in February 2024.

The establishment of FAI is based on the needs of the country where Malaysia needs to move quickly to lead the field of future propulsion. This is in line with the explosion of global digital transformation across various industrial disciplines that will open space for problem-solving innovation in the fields of manufacturing, finance, health, agriculture, renewable energy, security, economy and public services. Also related to the country's aspirations for the development of highly competent human capital in the field of artificial intelligence, FAI will also intensify international cooperation to ensure the sustainability and safety of the use of artificial intelligence technology in Malaysia to have a positive impact on society as a whole.



Welcome Messages From Dean

Dear Students,

Welcome to the Faculty of Artificial Intelligence (FAI). We are thrilled to support you on your journey into AI, providing a strong foundation in theory, practical experience, and ethical responsibilities.

As you study, remember you are preparing for a future influenced by AI in various industries. Approach challenges with curiosity, and utilize faculty support and available resources.

University life is also about personal growth and connections, so embrace every moment and seek guidance as needed. I look forward to witnessing your accomplishments here.

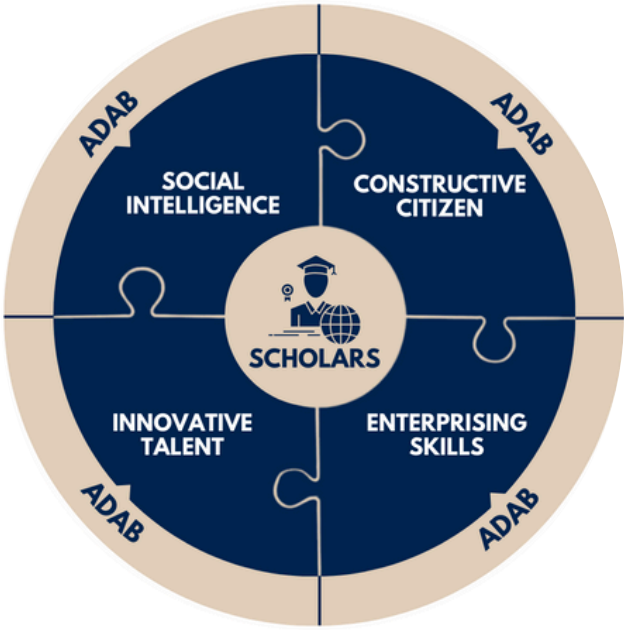
UTM GRADUATE ATTRIBUTES

UTM graduates need to have a high level of knowledge and skills in their respective fields of study; in line with the goal of producing competitive graduates to advance in the field of science and technology, as well as to be oriented towards innovative solutions. UTM has established six (6) attributes for all of its graduates. These attributes represent the knowledge, competencies, and values that students need to develop throughout their learning and experiences at UTM.



SCHOLAR – SS	Graduates have mastery of knowledge and understanding in their subject areas, possess independent and collaborative inquiry skills, rigorous analysis, critique, and reflection, and can innovate.
ADAB - A (MANNER)	Graduates can integrate mind, qalb (heart or inner self) and practices towards building a character of integrity, synergy, excellence and sustainability (ISES).
SOCIAL INTELLIGENCE - SI	Graduates can communicate, interact, and navigate effectively while being aware of diverse perspectives and possessing inspirational leadership qualities.
CONSTRUCTIVE CITIZEN – CC	Graduates can contribute to the betterment of mankind, society, environment and nation in a developmental and patriotic manner.
INNOVATIVE TALENT – IT	Graduates can strive for creative, innovative, problem-solving, practical, pragmatic, cost-efficient and sustainable solutions.
ENTERPRISING SKILLS - ES	Graduates are resourceful and can initiate and adapt to new ideas in innovative approaches to achieving desired results.

FUTURE ORIENTED CURRICULUM (FOCU)

There are seven (7) principle in UTM:

01 Fluid and Organic Curriculum

Interdisciplinary and multidisciplinary learning
A curriculum with a naturally developing flexible structure does not require a systematic and structured approach. It can be rearranged (updated and formed when necessary) to respond to changes in industry needs and students' educational experiences.

Flexible Structure
The curriculum considers students' abilities to choose from various course options and allows them to customize their educational path based on their interests and needs.

02 Teaching-Research NEXUS

- It refers to the relationship between teaching and research in higher education institutions. This includes how both activities can complement and enhance each other.
- It can create a culture of intellectual curiosity and inquiry that benefits faculty and students.
- Faculty members can engage in research relevant to their teaching.
- Students can benefit from the expertise of faculty members actively engaged in cutting-edge research and emphasise their competency skills.
- It facilitates knowledge transfer and innovative teaching practices from research to TVET institutions.

03 Humanistic and Well-Being

- It prioritises the holistic development of students, which not only focuses on academic achievement but also focused on self-development, emotional intelligence, and overall well-being.
- It aims to create a positive learning development that supports the development of self-awareness, self-appreciation, and personal goals.
- There are four main principles which are: i. Autonomy to choose; ii. Positive emotions to achieve the best; iii. Internal motivation to be the best; iv. Seeing humans as the best creation.
- It focuses on physical, mental, and emotional well-being. This approach empowers students to be "well-rounded", which could lead their lives and contribute to the community and excellence in all aspects of life, which aligns with UTM's slogan ", In the Name of God for Mankind".

04 Emerging Technology

- The latest technologies can affect how we live, work and interact in many aspects, including health, transportation, industry, education, etc.
- Researchers, scientists and engineers usually study this technology to develop and improve the performance, safety and usability of technology.
- Examples of emerging technologies include artificial intelligence, blockchain, the Internet of Things (IoT), 5G, and robotics.

05 Industry, Community and Academia Collaboration

Implementing a curriculum involves the integrated participation of industry, community and academia in designing the curriculum, assessment, teaching and learning.

06 HyFlex Leaning

- It refers to hybrid learning allowing students to attend each learning session face-to-face or online.
- In HyFlex learning, students can attend in person in the classroom or online via an online learning platform.

07 Diversity, Inclusion and Personalized Learning

- The main goal of a diversity and inclusion environment is to ensure everyone is respected and valued in the workplace or community.
- Learning about diversity and inclusivity typically involves learning about individual differences such as culture, ethnicity, gender, age, and religion and ways to promote engagement and respect in a diverse environment.

EXPERIENTIAL LEARNING AND COMPETENCY BASED EDUCATION LANDSCAPE (EXCEL)

Experiential Learning and Competency-Based Education Landscape (EXCEL) is a framework aimed at transforming academic programs to produce lifelong learners, innovative adept entrepreneurs, creative practitioners and change-makers. EXCEL is exemplified through four thrusts of experiential learning which are industry-based, community-based, research-based and personalised learning. These are termed as:

1. REAL – Research Infused Experiential Learning
2. IDEAL – Industry Driven Experiential Learning
3. CARE – Community Resilience Experiential Learning
4. POISE – Personalized Experiential Learning

Excel core applied in Bachelor in Artificial Intelligence with Honours is IDEAL focusing on Industry Infused. List of courses involved with IDEAL is as follows:

Course Code	Course Name	Credit	Percentage of Industry Infused (%)
SAIA 3122	Final Year Project 1	2	1.7
SAIA 3134	Final Year Project 2	4	3.3
SAIA 3146	Industrial Training	6	5.0

ENTRY REQUIREMENTS

FAKULTI/ PROGRAM KOD TEMPOH SEMESTER	LEPASAN DIPLOMA UA/ POLITEKNIK	LEPASAN KELAYAKAN SETARAF (A LEVEL/ IB/ AUSMAT)
FAKULTI KECERDASAN BUATAN, UTM KUALA LUMPUR **KOD UPU** **UT6481006** **SARJANA MUDA KECERDASAN BUATAN DENGAN KEPUJIAN** **6 SEMESTER**	**Memenuhi Syarat Am Universiti Serta KEPERLUAN KHAS PROGRAM** Memiliki Diploma Sains Komputer atau Kejuruteraan Perisian atau Teknologi Maklumat atau Sistem Maklumat dari UTM/ IPT/ Setaraf dengan mendapat **sekurang-kurangnya PNGK 3.00;** **atau** Memiliki Diploma dalam bidang Kejuruteraan, Sains dan Teknologi dengan mendapat **sekurang-kurangnya PNGK 3.00;** **atau** Bagi calon-calon lepasan diploma selain dari yang dinyatakan di atas boleh dipertimbangkan untuk memohon; **atau** Bagi calon-calon yang mendapat PNGK kurang dari 3.00 tetapi mempunyai **sekurang-kurangnya 2 tahun pengalaman bekerja** dalam bidang yang dipohon juga layak memohon **dan** Mendapat **sekurang-kurangnya kepujian (Gred C)** pada peringkat SPM dalam mata pelajaran berikut: • Matematik atau • Matematik Tambahan **atau** Mendapat **sekurang-kurangnya Gred C** pada peringkat Diploma dalam salah satu mata pelajaran Matematik. **dan** Mendapat sekurang-kurangnya **Band 2.0** dalam Malaysian University English Test **(MUET)** untuk peperiksaan yang bermula **Sesi 1 tahun 2021** atau **Band 2 untuk peperiksaan sehingga tahun 2020** mengikut tempoh sah laku pada tarikh permohonan. **dan** Calon tidak mempunyai ketidakupayaan seperti berikut: **(Pendengaran/ Ketidakupayaan Fizikal)** yang menyukarkan kerja amali.	**Memenuhi Syarat Am Universiti serta KEPERLUAN KHAS PROGRAM** Memiliki kelayakan **GCE A Level** dengan sekurang- kurangnya mendapat **Gred C atau** Memiliki kelayakan **International Baccalaureate Diploma (IB)** dengan mendapat **Gred 4 mata pelajaran peringkat HL** atau Memiliki **Australian Matriculation Program (AUSMAT)** dengan mendapat **Gred C/ 60% ATAR Rank** dalam mata pelajaran berikut: • Mathematics • Physics • Chemistry • BiologyComputing/Programming/ Computer Engineering • Economics • Accounting • Business Management & Enterprise • Information Technologies Studies • Specialist Mathematics • Business Studies • Further Mathematics • English Second Language/ English Studies **dan** Mendapat sekurang-kurangnya kepujian **(Gred C)**pada peringkat SPM dalam mata pelajaran berikut: • Matematik atau • Matematik Tambahan **dan** Mendapat sekurang-kurangnya **Band 2.0** dalam Malaysian University English Test **(MUET)** untuk peperiksaan yang bermula **Sesi 1 tahun 2021** atau **Band 2 untuk peperiksaan sehingga tahun 2020** mengikut tempoh sah laku pada tarikh permohonan/ **Band 5.5** dalam ujian **IELTS (Academic)**/ score **500** dalam ujian **TOEFL PBT**/ score **46** dalam ujian **TOEFL IBT**. **dan** Calon tidak mempunyai ketidakupayaan seperti berikut: **(Pendengaran/Ketidakupayaan Fizikal)** yang menyukarkan kerja amali.

PROGRAM EDUCATIONAL OBJECTIVES (PEO)

The educational objectives of the program to produce Bachelor in Artificial Intelligence with Honours graduates are as follows:

- **PEO 1:**

Kompeten dalam mengaplikasi pengetahuan untuk menghasilkan penyelesaian yang berdaya tahan dan mantap selari dengan keperluan negara berteraskan teknologi kecerdasan buatan.

Competent in applying domain knowledge to produce resilient and robust solutions based on artificial intelligence technologies inline with the country's aspiration.

- **PEO 2:**

Berkemahiran dalam interpersonal dan komunikasi untuk maju secara profesional dalam organisasi dan masyarakat global.

Proficient in interpersonal and communication skills to advance professionally in organizations and the global community.

- **PEO 3:**

Memiliki nilai keusahawanan, kepimpinan dan etika dalam kerjaya.

Possess entrepreneurial, leadership, and ethical values in the profession.

PROGRAM LEARNING OUTCOME (PLO)

To produce skilled and competent graduates in the field of AI, here are the 11 PLO statements that are aligned with the requirements of MQF 2.0.

PLO 1: Memperoleh teori dan pengetahuan teknikal secara komprehensif dalam bidang kecerdasan buatan.

Acquire comprehensive theory and technical knowledge in the field of artificial intelligence.

PLO 2: Merekabentuk penyelesaian masalah secara kreatif, inovatif, dan efektif berteraskan teknologi kecerdasan buatan.

Design creative, innovative, and effective problem solutions based on artificial intelligence technologies.

PLO 3: Menggunakan pelbagai teknik kecerdasan buatan untuk menyelesaikan pelbagai masalah kompleks dan merentas disiplin.

Apply various artificial intelligence techniques to solve a broad range of complex and multidisciplinary problems.

PLO 4: Berkolaborasi secara efektif bersama pemegang taruh berdasarkan amalan profesional.

Collaborate effectively with stakeholders based on professional practice.

PLO 5: Berkomunikasi dengan efektif secara lisan dan penulisan dengan pelbagai pemegang taruh.

Communicate effectively both in oral and written to multiple stakeholders.

PLO 6: Menggunakan kemahiran digital berasaskan kecerdasan buatan dalam menyelesaikan pelbagai masalah kompleks dan merentas disiplin.

Utilise artificial intelligence based digital skills in solving a broad range of complex and multidisciplinary problems.

PLO 7: Menggunakan kemahiran numerik berasaskan kecerdasan buatan dalam menyelesaikan pelbagai masalah kompleks dan merentas disiplin.

Utilise artificial intelligence based numeracy skills in solving a broad range of complex and multidisciplinary problems.

PLO 8: Mempamerkan bakat kepimpinan, kebolehan berdikari, berkolaborasi dan mengambil tanggungjawab dalam kerjaya kecerdasan buatan.

Demonstrate leadership talent, ability to work independently, collaboratively, and taking responsibility in the artificial intelligence profession.

PLO 9: Mempertingkat kemampuan diri melalui pembelajaran berterusan dan pembangunan profesional.

Enhance self-capabilities through lifelong learning and professional development.

PLO 10: Mengaplikasi kemahiran keusahawanan dalam membangunkan penyelesaian berinovasi berasaskan kecerdasan buatan.

Apply entrepreneurial skill in developing artificial intelligence based innovative solutions.

PLO 11: Mematuhi etika dan amalan professional.

Adhere to ethics and professional practice.

SYNOPSIS OF COURSES

COURSE COMPONENT	CODE	COURSE NAME	SYNOPSIS
PROGRAM CORE	SAIA 1113	Python Programming	This course provides a comprehensive introduction to Python, a versatile and powerful programming language widely used in various domains such as software development, data analysis, artificial intelligence, and web development. Students are introduced to core programming concepts like data structures, conditionals, loops, variables, and functions. Students will learn to analyse and comprehend existing programs and create solutions to programming problems individually and in teams by generating programs that apply the Python programming strategies covered in the course. At the end of the course, students will gain hands-on experience and foundational knowledge to write efficient, readable, and functional code using Python for various applications.
	SAIA 1123	Introduction to AI	The goal of the course is to give students a thorough foundation in artificial intelligence (AI). These multidisciplinary topics are to give students a foundational understanding of ideas that will be useful in today's technologically advanced environment. Students will learn about the basic models and methods that are frequently used in the applications of artificial intelligence.
	SAIA 1133	Data Management	This course provides students with a comprehensive understanding of data management, including relational database systems, data modelling, and SQL. It emphasizes practical application, data governance, quality, ethics, and data integrity. Students learn to design, implement, and administer databases effectively and are equipped with digital skills, including cloud-based solutions and digital tools. The course also enhances communication abilities, preparing students to navigate data management in diverse professional settings and adapt to emerging trends. At the end of the course, students will be well-prepared to navigate the intricacies of data management in diverse professional settings, possessing a versatile skill set that includes database design, practical implementation, effective communication, and adaptability to emerging digital trends.
	SAIA 1143	Discrete Mathematics	This course is designed to provide students with a solid foundation in discrete mathematics, emphasizing concepts essential for the field of Artificial Intelligence (AI). Discrete mathematics forms the backbone of many AI algorithms, protocols, and theories. The course covers fundamental topics including set theory, logic, functions, graph theory, with a focus on applications relevant to AI.
	SAIA 1153	Mathematics for Machine Learning	This course provides a comprehensive introduction to the fundamental mathematical concepts and techniques essential for understanding and implementing machine learning algorithms. Students will gain a deep understanding of linear algebra, matrix decomposition, vector calculus, data modeling, and parameter estimation, all of which are critical foundations for machine learning. Equipped with the basic concepts and how to fit into the larger context of machine learning, Therefore, these courses spend on background mathematics.
	SAIA 1163	Computer Systems and Networks	This course provides a comprehensive introduction to computer systems and networks, covering both hardware and software aspects. Students gain a deep understanding of the fundamental principles, architectures, and protocols that underpin modern computing systems including CPU and GPU architectures, memory hierarchy, I/O devices, operating system concepts, process and memory management, file systems and device management The course also covers network fundamentals, diverse protocols, and in-depth analysis of network types. Advanced topics cover wireless networks, cybersecurity, cloud computing and emerging technologies particularly quantum computing. At the end of this course, students are equipped with the knowledge and skills necessary to design, implement, and manage computer systems and networks effectively.

COURSE COMPONENT	CODE	COURSE NAME	SYNOPSIS
PROGRAM CORE	SAIA 1173	Probability and Statistics	This course is designed to provide students with a comprehensive understanding of basic rules of probability, and statistical inference which are fundamental statistical principles behind machine learning. Students will be able to use them in modelling uncertainty in obtaining and recording data. They will be able to utilize graphical and numerical summaries of data in understanding data-generating processes, and understand the logic of statistical inference, and will be able to apply common inferential procedures. Students also will be exposed to the computational aspects of statistics using data analysis software. Topics include conditional probability, random variables, probability distributions, the law of large numbers, convergence, limiting distributions, central limit theorem, point and interval estimation, and hypothesis testing.
	SAIA 1183	Data Structure & Algorithm	This course underscores the theoretical and practical aspects of data structure concepts, accompanied by detailed algorithms for each data structure. Students will gain proficiency in abstract data-type concepts through class-based learning and subsequently apply these concepts in the implementation of data structures. Additionally, the course covers recursive programming techniques and algorithm efficiency analysis employing asymptotic notation (Big O/Omega/Theta). Various sorting and searching techniques will be explored as fundamental operations within data structures, accompanied by an in-depth efficiency analysis of each algorithm. Furthermore, the course delves into linear data structures such as linked lists, stacks, and queues, while also introducing non-linear data structures like trees and binary search trees. Ultimately, upon completion of this course, students are expected to enhance their digital skills significantly.
	SAIA 1193	Computational Intelligence	In this course, students will explore the fascinating realm of algorithms and models inspired by natural intelligence. Students will gain a deep understanding of the theories and skills to model the domain problem with the appropriate techniques and algorithms in Computational Algorithm. Students will be exposed to topics including Neural Network, Evolutionary Computation and Fuzzy Logic with the hands-on to apply the algorithms in solving the problems at hand. At the end of the course, students should be able to appreciate the contribution of CI in solving real-world problems which include designing, developing and optimizing intelligent systems.
	SAIA 1013	Responsible AI and Ethics	This course addresses the ethical considerations and responsibilities that must be considered concerning artificial intelligence. It encompasses organizational practices and responsibilities to ensure the development and operation of AI in a positive, accountable, and ethical manner. With appropriate ethics and responsibility, the objective of this course is to equip students with the knowledge and guided skill set necessary to develop AI for the benefit of society and technology consumers. In addition, the course underlines the significance of comprehending the risk, impacts and threats posed by new developments in AI technology, as well as the application of present regulations. Ethical issues in AI, AI governance, AI system transformation, ethical risk assessment and management, ethical matrices, along with societal and educational AI ethics will be among the subjects covered.
	SAIA 1023	AI and Its Application	This course emphasizes the practical implementation and real-world applications of AI across diverse sectors, prioritizing verifiable and explainable AI methodologies. Through immersive case studies, students will gain exposure to implementing AI solutions in various domains, emphasizing the verifiability and explainability of the AI algorithms and models used. Moreover, students actively participate in real-world AI applications within their chosen domain, emphasizing problem-solving, verifiable implementation, and clear presentation of findings. At the end of the course, students will develop a strong foundation for applying AI techniques across diverse domains, enabling them to make informed decisions while emphasizing trustworthy and explainable solutions in the AI application landscape.
	SAIA 2113	Machine Learning	The aim of this course is to provide students with an introduction to the field of machine learning, covering fundamental concepts, algorithms, and applications. This course will cover theoretical concepts and practical application in various machine learning models and techniques such as supervised learning and unsupervised learning. At the end of this course, students will be able to solve a real world problem through critical thinking and life-long learning activities.

COURSE COMPONENT	CODE	COURSE NAME	SYNOPSIS
PROGRAM CORE	SAIA 2123	Reinforcement Learning	Reinforcement Learning (RL) is a subfield of artificial intelligence that focuses on agents learning to make decisions through interactions with an environment. This course provides an in-depth introduction to the principles, algorithms, and applications of Reinforcement Learning. Students will gain hands-on experience implementing RL algorithms and solving real-world problems using python, Matlab or any suitable tools.
	SAIA 2133	Computer Vision	This course provides a comprehensive introduction to computer vision. Computer vision involves the development of techniques and algorithms that enable machines to interpret and understand visual information from the world. Students will learn basic concepts of computer vision as well as hands-on experience to solve real-life vision problems. Computer vision involves the development of techniques and algorithms that enable machines to interpret and understand visual information from the world. The course covers fundamental principles, techniques, and applications of computer vision, equipping students with the knowledge and skills necessary to explore this rapidly evolving field. Major topics include image processing, detection and recognition, geometry-based and physics-based vision and video analysis.
	SAIA 2143	Data Wrangling and Visualization	This course provides students with the foundational skills needed to clean, organize, and prepare raw data for analysis. Participants will gain hands-on experience using popular tools and techniques to tackle common challenges associated with messy datasets. The emphasis tools like spreadsheets, Python libraries and Power BI to make the learning experience accessible. This course will allow students to acquire effective presentation skills to articulate and discuss data wrangling and visualization outcomes in both written and oral formats. The project allows students to apply their skills in a practical setting and showcase their understanding of data wrangling and visualization concepts.
	SAIA 2153	Deep Learning	This course is designed to propel students into the forefront of the dynamic field of deep learning. Throughout this comprehensive program, students will acquire proficiency in advanced neural networks, delve into the intricacies of computer vision, natural language processing (NLP), and generative modelling. The curriculum includes in-depth coverage of prominent deep learning models, including Convolutional Neural Networks (CNNs), Recurrent Neural Networks (RNNs), and Generative Adversarial Networks (GANs). By the course's conclusion, students will possess the skills and knowledge needed to tackle intricate real-world challenges, making them adept practitioners in the ever-evolving domain of deep learning.
	SAIA 2163	Natural Language Processing	The course will encompass a wide range of topics, including tokenization, part-of-speech tagging, named entity recognition, syntactic parsing, word embeddings, deep learning for NLP, and ethical considerations in NLP. Students will engage in hands-on exercises, projects, and discussions, fostering a deep understanding of the field and preparing them for the challenges and opportunities in the ever-evolving world of Artificial Intelligence. Upon completing this course, students will not only have a solid foundation in Natural Language Processing but will also possess the cognitive, communication, and digital skills necessary for success in their academic and professional journeys in the field of Artificial Intelligence. The knowledge gained in this course will empower students to contribute to cutting-edge developments in NLP and shape the future of AI-powered language technologies.
	SAIA 2173	Generative AI	The aim of this course is to provide students with a basic understanding of Generative Artificial Intelligence focusing on developing models capable to generate new data or information. This course will cover theoretical concepts and practical application in various generative models and techniques such as probabilistic models, generative adversarial networks (GANs) and autoencoders. At the end of this course, students will be able to solve a real-world problem through critical thinking and life-long learning activities.

COURSE COMPONENT	CODE	COURSE NAME	SYNOPSIS
PROGRAM CORE	SAIA 2183	AI for Technology Venture	This course delves into the dynamic intersection of Artificial Intelligence (AI) and technology ventures, exploring how cutting-edge AI technologies can be harnessed to drive innovation, create business value, and shape the future of industries. The course is designed to equip students with a comprehensive understanding of the strategic, operational, and ethical dimensions of integrating AI into technology ventures.
	SAIA 3113	AI Engineering	This course aims to provide students with an understanding and hands-on experience in developing, managing and deploying end-to-end AI systems. This course focuses on the practical aspects of implementing MLOps practices within an AI lifecycle. Students will gain hands-on experience with industry-standard tools and techniques used in the operationalization of AI systems. At the end of the course, students will acquire a well-rounded skill set and knowledge base that integrates technical proficiency, effective communication, ethical awareness and practical experience essential for success in this dynamic field.
FACULTY CORE	SAIA 3122	Final Year Project 1	This is the first part of the Final Year Project that every student must fulfil successfully. Students are introduced to the application development through discussion with the appointed supervisor. At the same time, students need to apply various artificial intelligence (AI) techniques to solve a broad range of complex and multidisciplinary problems. Students are guided through a step-by-step practice to complete the initial stages of proposal, planning and design of a project. Students must also meet regularly with supervisor(s) who will monitor their continuous progress. Students are required to prepare a report and present their initial work.
	SAIA 3134	Final Year Project 2	The aim of the Final Year Project 2 is to provide students the opportunity to explore and implement creative and innovative knowledge utilising AI-based digital skills in solving a broad range of complex and multidisciplinary problems. Furthermore, students are exposed to project management planning and execution. With these skills, it is hoped that the students will gain knowledge and experience in planning, designing and solving problems systematically, thus when they graduate, they will be ready to work independently, collaboratively, and take responsibility in the artificial intelligence profession. Students must meet regularly with supervisor(s) who will monitor their continuous progress. At the same time, students are required to prepare a report and present their final work.
	SAIA 3146	Industrial Training	Industrial Training refers to the placement of a student at an organization for a minimum of 20 weeks to provide students with practical, hands-on experience in a real-world work environment. This course aims to bridge the gap between theoretical knowledge acquired in the classroom and practical application in the industry. It is also intended for the students to boost their skills which are needed by a profession and gain exposure in every aspect of real career life. Students will be evaluated based on two components: 1) student performance by organization supervisor and 2) student performance by faculty supervisor. The organization supervisor is expected to assess the student performance based on work performance and students' personality. While the faculty supervisor will evaluate the industrial training report and the presentation of the industrial training at the end of the attachment. This course embraces generic skills such as practical and digital skills, communication and ethics and professionalism skills.

COURSE COMPONENT	CODE	COURSE NAME	SYNOPSIS
ELECTIVE COURSE (CHOOSE 10)	SAIA 3213	Expert System	The Expert System course encompasses core concepts, methodologies, and practical applications. Beginning with an introduction to defining expert systems, it navigates through their evolution, knowledge acquisition, and representation techniques. Emphasizing inference engine functionality, it explores tools, platforms, and their practical applications. Students delve into domain-specific problem-solving and ethical considerations. This comprehensive syllabus aims to equip learners with a profound understanding of rule-based expert systems' development, application across domains, and their ethical implications.
	SAIA 3223	Advanced Deep Learning	This course equips learners with cutting-edge deep learning knowledge and skills to tackle complex real-world problems covering a diverse range of topics, from advanced neural network architectures to deploying models on GPU-based hardware. The theoretical foundations are implemented using hands-on programming exercises and practical projects. This course exposes students to the latest state-of-the-art GPU computational server when implementing applications in deep learning.
	SAIA 3233	Advanced NLP	This advanced course covers the sophisticated aspects of Natural Language Processing (NLP), covering a broad spectrum of advanced topics such as contextual embeddings, transformer architectures, advanced machine learning techniques for NLP, and the ethical implications of artificial intelligence in language processing. Through a curriculum designed to challenge and expand their understanding, students will engage in comprehensive exercises, collaborative projects, and critical discourse. Throughout the course, participants will be immersed in complex problem-solving activities and the development of innovative NLP models, honing their ability to analyze and synthesize information. They will explore the intricacies of cutting-edge technologies like BERT and GPT and examine case studies to understand the real-world impact of NLP. The course will emphasize the practical application of theoretical knowledge, ensuring students can seamlessly transition their skills to industry or research settings.
	SAIA 3243	Evolutionary Computing	This course is an introduction to the field of evolutionary computing (EC) and covers the major types of evolutionary algorithms (EAs). EAs are a class of stochastic, population-based algorithms inspired by natural evolution theory, genetics, and population dynamics, capable of solving complex optimization and modeling problems. This course requires a programming background, and students will implement course concepts to gain hands-on experience in solving complex problems with EAs. The course will follow a unified approach focusing on the general characteristics of all EA types.At the end of the course, the student will be able to analyse the concept of evolutionary computation and apply to solve the problems in AI application.
	SAIA 3253	Algorithm for Optimization	This course introduces students to the fundamental concepts of optimization, mathematical algorithms, and practical implementations. The students will learn different types of optimization techniques, formulations, and the algorithms employed to solve various real-world problems, emphasizing hands-on applications and case studies. Topics to be covered include classical optimization approaches with gradient based methods, linear and quadratic programming. The course also introduces metaheuristic optimization approaches such as genetic algorithms, particle swarm optimization and ant's colony optimization algorithms. At the end of the course, students should be able to use optimization algorithms to solve problems in complex landscapes.
	SAIA 3263	AI in Metaverse	This course provides an in-depth exploration of the dynamic intersection between Artificial Intelligence (AI) and the Metaverse. Students will embark on a journey through the components of the Metaverse, understanding its evolution, and gaining hands-on insights into how AI is reshaping virtual environments. From generative models to virtual commerce and ethical considerations, this course delves into the nuanced applications of AI, offering a comprehensive understanding of the metaverse landscape.

COURSE COMPONENT	CODE	COURSE NAME	SYNOPSIS
ELECTIVE COURSE (CHOOSE 10)	SAIA 3313	Intelligent Digital Twin	This elective course explores the emerging field of Intelligent Digital Twin within the context of Artificial Intelligence. A Digital Twin is a virtual representation of a real-world system or process, and the integration of intelligence enhances its capabilities for analysis, prediction, and decision-making. The course focuses on the principles, technologies, and applications of Intelligent Digital Twins in various domains. This course also explores the synergies between Intelligent Digital Twins and System Thinking. It integrates the principles of system thinking to provide a holistic understanding of complex systems. Students will engage in projects or case studies and apply system thinking approaches to design Digital Twins.
	SAIA 3323	Advanced Vision System	This course is designed to provide students with advanced concepts in computer and machine vision systems, enabling them to gain a comprehensive application of current trends in computer vision system. Through lessons and practical applications, students will explore the principles, theories and application of vision systems in various sectors such as industrial, agriculture, transportation, medicine, and smart cities. At the end of this course, the students will acquire hands-on experience in designing and implementing computer vision systems to solve given problems.
	SAIA 3333	Industrial Automation	This course is designed to provide students with a comprehensive understanding of industrial automation systems used in contemporary manufacturing and production. Through theoretical lessons and practical applications, students will delve into control systems, instrumentation, programmable logic controllers (PLCs), and various automation technologies crucial for industry settings.
	SAIA 3343	AI in Operation Management	This course provides an in-depth exploration of the intersection between artificial intelligence (AI) and operations management, offering students a comprehensive understanding of how AI technologies can be leveraged to optimize operational processes in various industries. The course covers foundational concepts of AI, its integration into operations management strategies, and practical applications for improving efficiency, quality, and decision-making.
	SAIA 3353	Machine learning for IOT	This course delves into the integration of Machine Learning (ML) techniques within the domain of Internet of Things (IoT). It provides a comprehensive understanding of how ML algorithms can be applied to IoT data generated by interconnected devices, sensors, and systems. Students will explore various ML models, algorithms, and optimization techniques tailored for IoT applications. The integration of computer hardware and ML codes will also be implemented in the course.
	SAIA 3363	Data Fusion	ICT development, e.g., remote sensing, IoT, leads to an enormous growth of available various data for analysis and decision making. To integrate this heterogeneous or multimodal data, data fusion approaches are applied. In this course, students will learn data fusion approaches as a framework for the joint analysis and decision-making using data from multiple sources (modalities) that allows achieving stronger information/knowledge and decision not recoverable by a single source. At the end of the course, students should be able to apply the knowledge through projects which cover data integration, analysis, and interpretation of data from multiple sources to provide a comprehensive and accurate understanding of a given phenomenon.
	SAIA 3373	Intelligent Robotic Process Automation	Robotic process automation (RPA) is a software technology that makes it easy to build, deploy, and manage software robots that emulate human's actions interacting with digital systems and software. This course is an introduction to RPA and how it can be used to solve business process problems by embedding intelligence in automation. In the first part of the course, students will first learn how RPA fits into a modern organisation, the types of issues it can be used to solve and how to analyse a process for potential intelligent automation. In the second part of the course, students will learn methods to implement an intelligent RPA solution in an organisation. A state-of-the-art RPA tool from a major vendor is taught in the labs with opportunities and encouragement to explore others.

COURSE COMPONENT	CODE	COURSE NAME	SYNOPSIS
ELECTIVE COURSE (CHOOSE 10)	SAIA 3383	Robotics	This course introduces students to the basic principles underlying the design and analysis related to robotic systems. Students are introduced to various classifications, types and components (e.g. sensors, controller, actuator, etc.) of robots. The robot modelling and design specification are also discussed. By adapting the knowledge obtained, students will be able to apply the robot models as well as be able to correctly design and simulate data-driven robot trajectory and motion planning. This course also helps students to understand and use concepts, theory, and algorithms of Artificial Intelligence (AI) related to robotics.
	SAIA 3413	AI for Digital Transformation	This course equips students with the understanding of artificial intelligence (AI) as an essential technology in pursuing a digital transformation journey. The course is mainly into two main sections. In the first section, AI applications and tools based on real world cases in various functions of a business operations from different domains such as retail, financial, healthcare, creative media and agriculture will be discussed and highlighted. In the second section, digital strategies using AI for driving business transformation will be discussed. Based on the topics covered in both sections, students are required to recommend an AI solution for a given case study through a group project. Students will also explore the issues and challenges of adopting AI technologies in addition to its benefits and learn the implementation aspect of digital transformation.
	SAIA 3423	AI Strategy and Business Models	This course provides an in-depth exploration of the strategic integration of Artificial Intelligence (AI) in business models. It is designed to equip students with the knowledge and skills needed to understand, plan, and implement AI solutions as added value within various business contexts based on Business Model elements. The course covers a broad range of topics, from the foundational aspects of business AI technology to its practical applications in enhancing business operations and competitive advantage.
	SAIA 3433	AI in Supply Chain Management	This course provides an in-depth exploration of the applications of artificial intelligence (AI) in supply chain management. Students will gain theoretical knowledge and practical skills to understand and implement AI technologies to optimize various aspects of supply chain processes. Topics include demand forecasting, inventory management, and logistics optimization.
	SAIA 3453	AI-Powered Talent Management	AI Powered Talent Management (TM) focuses on optimizing human resources management through the integration of artificial intelligence (AI). The course is organized into three categories: first, addressing the basics with an emphasis on understanding TM processes and AI integration. The second category explores practical AI applications in recruitment, onboarding, performance management, and strategic talent development. The third category explores the contextual aspects of security, privacy, future trends, and ethical considerations in AI and HR. Concluding with a hands-on project, students apply their knowledge to build a design of a practical AI-driven TM system for enhancing their skills on AI-Powered TM.
	SAIA 3463	AI in Financial	This course offers a comprehensive exploration of the intersection between artificial intelligence (AI) and finance. It builds a foundation that progresses from fundamental finance concepts to applications of AI in the financial sector. This course is designed to equip participants with a holistic understanding of the symbiotic relationship between AI and finance as well as ethical considerations, and regulatory challenges in this dynamic and rapidly evolving field.
	SAIA 3513	Extended Reality	This course introduces students to the exciting and rapidly evolving field of Extended Reality (XR), encompassing Virtual Reality (VR), Augmented Reality (AR), and Mixed Reality (MR). Students will explore the theoretical foundations, technical aspects, and practical applications of XR technologies. Through a combination of lectures, hands-on projects, and discussions, students will gain a comprehensive understanding of XR and its impact on various industries. At the end of the course, students should be able to work collaboratively and create XR Content for practical applications, demonstrating the ability to create immersive and interactive experiences in virtual and augmented environments.

COURSE COMPONENT	CODE	COURSE NAME	SYNOPSIS
ELECTIVE COURSE (CHOOSE 10)	SAIA 3523	Geospatial AI	This course introduces students to basic knowledge and understanding of Geospatial Artificial Intelligence (GeoAI) an application of Artificial Intelligence (AI) fused with geospatial data, science, and technology to accelerate real-world understanding of environmental impacts, operational risks and business opportunities. GeoAI is transforming the speed at which we extract meaning from complex datasets, thereby aiding us in addressing the earth's most pressing challenges. It reveals and helps us perceive intricate patterns and relationships in a variety of data that continues to grow exponentially. Organizations leveraging GeoAI are revolutionizing how they turn data into information, with models that adapt even as data evolve as preparation to become resilient in the future with accelerated spatial problem-solving.
	SAIA 3533	Metaverse in Learning Experience	This course explores the dynamic intersection of education and emerging technologies within the Metaverse. Students will embark on a journey to understand the Metaverse concept, delve into the foundations of Virtual Reality (VR), Augmented Reality (AR), and Extended Reality (XR) analyze various Metaverse platforms, and design pedagogically sound experiences for virtual learning environments. Students will actively participate in discussion, participate in team exercises and collaborate on group work projects involving applications and show responsibility towards group decision.
	SAIA 3543	Metaverse and Urban Planning	The course is structured to provide a comprehensive understanding of urban development principles, data-driven planning, smart digital twins, and the implementation of virtual planning techniques. In this dynamic and innovative elective, students will delve into the intersection of urban development and the metaverse, exploring how advanced AI technologies and digital twinning are revolutionizing urban planning.
	SAIA 3553	AI for Policy	Embracing the phrase of "AI without policy is dangerous & policy without AI is powerless," this course equips students with a harmonized understanding of AI policy, emphasizing the crucial balance between the (1) advancement of AI as a technology for STI policy and socioeconomic development; (2) policy process in making AI technology a success, and (3) adoption of AI as an analytical tool in the policy process. At the end of this course, the students are expected to understand the importance of AI for policy and play roles as professional policy actors.
	SAIA 3563	Cyber Resilience	This course provides students with a comprehensive understanding of the ability to identify vulnerabilities, detect, respond and recover from cyber incidents in the domain of artificial intelligence (AI). Students will gain the knowledge and skills necessary to safeguard AI from evolving cyber threats. By the end of this course, students will have the knowledge and skills in building the capacity to anticipate, respond to, and recover from cyber threats.
	SAIA 3573	Brain Computer Interaction	This course focuses on the seamless integration of Artificial Intelligence (AI) concepts into Brain-Computer Interaction (BCI). Tailored for students with a foundation in AI, the course explores how AI can enhance BCI capabilities, fostering innovative applications and solutions. The course will cover theoretical foundations, practical applications, and emerging trends in BCI, and will introduce students to the role of AI in enhancing BCI capabilities.
	SAIA 3583	AI for Content Generation	This course offers a dynamic field of artificial intelligence (AI) and its applications in content creation. With a focus on content generation across diverse mediums, including text, images, and multimedia, students will explore the principles, methodologies, and tools that drive the synergy between AI and creative expression. Students will learn to use the content generator tools, understand its benefits and the content generator models. . Students will also explore the ethical, social, and legal implications of using AI-generated content. At the end of the course, through a combination of theoretical concepts and hands-on practical exercises, students will gain a comprehensive understanding of AI techniques for content generation and their applications in various domains.

UNIVERSITY GENERAL COURSES

The University's general course is based on the Second Edition General Subject Syllabus (MPU) was issued by the Ministry of Higher Education in December 2016. The general course offered able to contribute to the development of soft skills as a person UTM graduates based on the UTM Graduate Attributes 2017 and the university's desire to produce innovative and entrepreneurial graduates.

The Senate meeting approved the new structure of the University's general course has been offered to new students starting academic session 2017/2018. The following are the sixth main clusters of the University's general courses:

- Cluster 1 (Appreciation of philosophy, value and history Cluster),
- Cluster 2 (Generic Skills Cluster),
- Cluster 3 (Knowledge Enhancement Cluster),
- Cluster 4 (Co-Curriculum and Service-Learning Cluster),
- Cluster 5 (Language Skills Cluster), and
- Cluster 6 (Entrepreneurship Cluster)

Undergraduates in the bachelor's degree Program are required to register for the University's General Courses during their Duration of Study. The structure of the general course is listed in the table below. More information on general courses can be found at:

https://ugs.utm.my/general-course/

UNIVERSITY GENERAL COURSES

Nilai Teras Malaysia (*Malaysia Core Value*)	Nilai & Jati Diri (*Value and Identity*)	Warga Global (*Global Citizen*)	Kemahiran Komunikasi (*Communication Skills*)	Kemahiran Berdaya Usaha (*Enterprising Skills*)

REQUIREMENTS CO-CURRICULAR COURSE REGISTRATION

Co-curriculum & Service learning is a course that involves practical activities to strengthen the soft skills of students. Students need to share the knowledge gained with the community. Therefore, students can serve the community in an organized way to provide benefits in line with their mission and skills. Students are given exposure to gain experience in a structured way through activities to identify community needs, propose appropriate projects, implement community projects and then reflect on those activities.

RULES FOR STUDENTS IN FULL TIME PROGRAMS

Disclaimer: Refer to Co-Curriculum Academic Handbook Based on Service Learning for more details.

The co-curricular courses are part of the University's General Courses. If a students failed in any of the courses, he/she may:

- Repeat the course
- Substitute the course with another one but the failed course will still appear on the student's transcript and will be used in the calculation of the CGPA.

Course Registration

1. Students are encouraged to register during the pre-registration period to ensure a place during their choice.
2. Students may take any course offered subject to its availability.
3. Students are not allowed to change courses once they have registered.
4. The Rules and Regulations of registrations are subject to change as deemed necessary by the University.

Credit Transfer (Credits Exemption)

1. UTM Diploma graduates are eligible for Credit Transfer for all co-curricular courses they have taken in previous programmes.
2. Credit transfer for graduates from other institutions of higher learning will only be given if the course is accredited and recognized by the Centre of Co-Curricular Courses and Service Learning (CCSL).
3. Application for Credit Transfer must be made during the first semester of the study. Approval from the co-curricular centre is required.

Final Examination Week

1. The final examination for the co-curricular courses, if any, will be held during the last week of lecture of each semester.

CO-CURRICULAR COURSE IMPLEMENTATION

Students are required to attend all courses as scheduled inclusive of outdoor or off campus activities such as camping, study tour, and social services. Every activity is designed to transfer theoretical knowledge to practical applications.

Meeting Times

The meeting hour for co-curricular courses is between 2.00 pm – 7.00 pm on every Tuesday. However, there are courses that will be conducted on Saturday mornings. The time allocated for the courses are a one- hour lecture or a two-hour practical activity.

Marking Scheme

The marking scheme usually followed by the trainers/lectures is as follows:

1. Cognitive Domain 20%
2. Psychomotor Domain 40%
3. Affective Domain 40%

Current Rules

Students are given the choice to select the activities that are of interest to them. However, the activities must be the ones offered by the co-curricular centre for that semester. Registration for the course is subject to the availability of places.

Upon registration of the course of their choice, students will not be allowed to change to another course. Students are recommended to consider their options carefully before making their decision. They are advised to refer to the timetable and the activities before making the final decision.

Students who registered for the co-curricular course with less than 80%attendance without valid reasons accepted by the University, will be awarded zero (0) mark for the course. They need to repeat the course. Each student is responsible to ensure that the credit requirement for the co-curricular courses is fulfilled in accordance with the University's Regulations.

Students are required to attend all courses as scheduled inclusive of outdoor or off campus activities such as camping, study tour, and social services. Every activity is designed to transfer theoretical knowledge to practical applications.

ACADEMIC ADVISORY

OpenAI. (2024). ChatGPT [Large language model]. https://chatgpt.com

Academic advising is a process that encompasses the development and delivery of accurate, up-to-date information regarding educational programs, and courses, resources, policies, procedures and career options to aid students in pursuing their academic and career goals.

Every student is assigned to an academic staff who is appointed as their academic advisor. The objectives of the academic advisory system are:

1. To guide and assist students in adapting themselves to the academic system of the University, especially at the initial stage.
2. To advise students in solving academic related problems such as workload, selection of courses and to explain the aim and purpose of the courses.
3. To identify and provide counselling to students facing problems as well as to develop a balanced character and positive attitude among students.
4. To act as a link between students and the faculty.

Students' Roles and Responsibilities:

1. Consider academic and career goals
2. Prepare questions before meeting with advisor
3. Initiate contact with advisor
4. Actively participate in the advising session
5. Ask questions
6. Know the academic calendar.
7. Observe the deadlines
8. Know when to register and drop or add courses
9. Schedule courses that are consistent with educational goals and that meet degree requirements
10. Accept responsibility for making final decisions on academic choices.

Advisor Roles and Responsibilities:

1. Development of educational plans
2. Clarification of career and life goals
3. Selection of courses and other educational experiences
4. Interpretation of UTM requirements
5. Enhancement of student awareness about educational resources available
6. Credit exemption and transfer
7. Evaluation of student progress toward established goals
8. Development of generic skills
9. Reinforcement of self-direction
10. Referral to and use of UTM support services
11. Ongoing evaluation of advising services

ACADEMIC SESSION, PROGRAM REGISTRATION AND COURSE REGISTRATION

ACADEMIC YEAR

The University Academic Year is divided into two regular semesters – Semester I and Semester II. Each semester consists of 14 weeks of lectures. Besides the two regular semesters, the University also offers a Short Semester between Academic Years. The semester is included in the calculation of duration of study for any specific course. Please refer to the Curriculum Structure of the programme of Bachelor in Artificial Intelligence with Honours.

PROGRAM REGISTRATION

New students are required to register for the programme offered on the date determined by the University. New students who fail to register for the program without any acceptable reason will have their admission automatically withdrawn. The registration for senior students is done automatically by the university based on previous examination results. Senior students, who have discontinued their study because of deferment or being suspended, need to re-register for the program.

COURSE REGISTRATION

Students must register for all courses taken in each semester. The registration of the courses must be made before the end of the mandatory course registration data which is two (2) days before the semester begins. Students must register with the correct course codes and section number. Students can only register for the courses approved by Razak Faculty. Students are responsible to amend any error in the course registration slip within the stipulated period.

REGISTRATION OF AUDIT COURSES (HADIR SAHAJA – HS)

Students are allowed to register for not more than (2) courses with HS status per semester with permission or direction by Razak Faculty. The credits for courses registered under HS status are not included in the calculation of GPA and CGPA. However, students who register for the HS courses must meet the attendance requirements and complete all assignments and coursework given by the lecturer.

WITHDRAWAL OF COURSES (TD-TARIK DIRI)

With the approval of the course lecturer and the verification of the academic advisor, students can apply to withdraw from any registered course no later than Friday of week nine (9) of the respective semester.

For more information can be found at School of Undergraduate Studies Website at **https://ugs.utm.my/academic-rules/** .

CREDIT LOAD PER SEMESTER

All full-time students, except those with Conditional Status (Kedudukan Syarat-KS) or those in the final two (2) semesters must register for no less than the Minimum Credit requirement that is 12 credits per semester, inclusive of HS and HW courses. Students who would like to register for more than 18 credits must obtain approval from the Dean. However, no student is allowed to take more than 22 credits per semester. Students with KS status are allowed to register between nine (9) to 13 credits only for the following semester. Their pre-registration of courses will be cancelled, and they must re-register within a specified time.

CREDIT EARNED

Credit earned is defined as credit of the Passed course including the Compulsory Attendance (HW) courses but not the Audit (HS) course. For students who are given Credit Transfer, the Credit Earned is the sum of the total transferred credit and the Passed credit.

CREDIT COUNTED

Credit counted is the credit taken in the current and in all semesters which are used to calculate the GPA and CGPA, respectively. The credit of the HS and HW courses are not included in the credits Counted.

CREDIT EXEMPTION

Students are awarded Credit Exemption if they possess a qualification from any accredited institution equivalent to the University's certificate, diploma or degree; or working experience that has been recognized by the Senate as equivalent to certain courses offered at certificate or diploma or university degree level. Application for Credit Exemption must be made together with the application for admission to the University or not later than week ten (10) during the first semester of study.

CREDIT TRANSFER

The Credit Transfer pertains to the cross-campus programme. Students can request for a transfer of credit provided that the course is taken in another institute of higher learning (IPT)approved by the University during the program of study at the University; and the request for transfer of credit is done during the semester in which the course is taken in that IPT.

ASSESSMENT AND GRADES

GRADING SYSTEM

A students' performance in any course is reflected by the grades obtained. The relationship between marks, grades and credit points is shown below:

MARKS	GRADE	POINT
90-100	A+	4.00
80-89	A	4.00
75-79	A-	3.67
70-74	B+	3.33
65-69	B	3.00
60-64	B-	2.67
55-59	C+	2.33
50-54	C	2.00
45-49	C-	1.67
40-44	D+	1.33
35-39	D	1.00
30-34	D-	0.67
00-29	E	0.00

TABLE: RELATIONSHIP BETWEEN MARKS, GRADES AND CREDIT POINT

The passing grade for any core course is a 'C' set by the Faculty upon the Senate's approval. Generally, D+ is the minimum passing grade.

FINAL EXAMINATION

The final examination must be conducted within a specific time frame, according to guidelines set by the University.

OpenAI. (2024). ChatGPT [Large language model]. https://chatgpt.com

SPECIAL EXAMINATION

A special examination can be conducted for cases as follows: (1) A student who cannot sit for the final examination due to illness that has been verified by Medical Officer of the University or any Government Hospital, (2) A final semester student with a Good Standing (Kedudukan Baik – KB) status but fails one (1) course taken during any of his/her last two semesters, exclusive of the Industrial Training semester.

For more information can be found at the School of Undergraduate Studies Website at **https://ugs.utm.my/academic-rules/**

CALCULATION OF GPA, CPA AND ACADEMIC STANDING

The students' academic standing is based on GPA (Grade Point Average) and CPA (Credit Point Average) calculated based on their achievement in all registered courses in any semester. Each grade is changed to point based on the formulation below:

$$\textbf{Point} = \textbf{Course credit} \times \textbf{Point value}$$

$$\textbf{GPA (Grade Point Average)} = \frac{\textbf{Total Point}}{\textbf{Total credit for the particular semester}}$$

$$\textbf{CPA (Cumulative Point Average)} = \frac{\textbf{Total point as a whole}}{\textbf{Total credit as a whole}}$$

The students' academic standing for any particular semester is measured based on GPA, while their standing as a whole is based on CPA which also determines the status of standing, whether Good Standing (Kedudukan Baik - KB), Probationary Standing (Kedudukan Bersyarat - KS) or Failure Standing (Kedudukan Gagal - KG) based on the following guidelines:

STANDING	CGPA
Pass (KB)	CGPA≥2.00
Conditional (KS)	1.70≤CGPA<2.00
Fail (KG)(Dismissal)	CGPA<1.70

TABLE:ACADEMIC STANDING

Students obtaining Probationary Standing (Kedudukan Bersyarat - KS) are not allowed to exceed 12 credits when registering for the semester that follows.

With approval from the Senate, a student who obtains a GPA < 1.00, but maintains a CGPA ≥ 1.70 can continue his/her study; or be suspended in the following semester: or be dismissed from the program. Example of CGPA calculation for first year student:

SEMESTER 1

COURSE	CREDIT COUNTED	MARKS(%)	GRADE	GRADE POINT	TOTAL GRADE POINT
SXXX 1213	3	78	A-	3.67	11.01
SXXX 1423	3	72	B+	3.33	9.99
SXXX 1513	3	80	A	4.00	12.00
SXXX 1042	2	75	A-	3.67	7.34
SSCE 1792	2	89	A	4.00	8.00
UHLE 1412	2	71	B+	3.33	6.66
Total	15				55

Total Credits Counted (TCC)=15
Total Grade Point (TGP)=55

GPA for Semester 1 = 55/15 = 3.67

For Year 1 Semester 1, GPA is equal to CGPA (CPA). Therefore, CPA for Semester 1 is 3.67

SEMESTER 2

COURSE	CREDIT COUNTED	MARKS(%)	GRADE	GRADE POINT	TOTAL GRADE POINT
SXXX 1713	3	86	A	4.00	12.00
SXXX 1023	3	80	A	4.00	12.00
SXXX 1011	1	86	A	4.00	4.00
UICI 1022	2	76	A-	3.67	7.34
SSCE 1793	3	72	B+	3.33	9.99
SSCE 1893	3	86	A	4.00	12.00
UKQB1##1	1	90	A+	4.00	4.00
Total	16				61.33

Total Credit Counted (TCC) for Semester 2 is 16 credits.
Total Grade Points (TGP) for Semester 2 is 61.33.

GPA for Semester 2 is 61.33/16 = 3.83.

Therefore, for CPA in Year 1:

$$= \frac{\text{Total point Semester 1 (55) + Total point Semester 2 (61.33)}}{\text{Total Credit Semester 1 (15 credits) + Total Credit Semester 2 (16 credits)}}$$

$$= \mathbf{3.75}$$

For more information can be found at the School of Undergraduate Studies Website at **https://ugs.utm.my/academic-rules/**.

ACADEMIC CALENDAR FOR 2025/2026
BACHELOR, MASTER AND DOCTORAL PROGRAMME
UNIVERSITI TEKNOLOGI MALAYSIA

DATE	PROGRAMME	PUBLIC HOLIDAY
International Undergraduate and Postgraduate Students 17 – 18 September 2025 (UTM JB) 27 – 28 September 2025 (UTM KL) **Local Postgraduate Students** 22 – 25 September 2025 (UTM JB) 27 – 28 September 2025 (UTM KL) **Local Undergraduate Students** 28 September 2025 (UTM JB & UTM KL)	Registration of New Students Semester I 2025/2026 Session (October Intake)

AWARD AND RECOGNITION

THE ROYAL ACADEMIC PRIZE

The prize is contributed by the Office of the Keeper of the Royal Seal. The prize is awarded to one (1) Bumiputra and one (1) non-Bumiputra graduate who have obtained a First-Class Degree and are actively involved in co-curricular activities. The prize includes cash of RM 2500, a certificate and a medal.

THE CHANCELLOR'S AWARD

This award is bestowed to the best two (2) graduates who have obtained a First-Class Degree. The award consists of cash, a certificate and a medal.

THE VICE-CHANCELLOR'S AWARD

This award is bestowed to the best graduate who has obtained a First-Class Degree from each faculty. The award consists of cash, a certificate and a medal.

THE ALUMNI'S PRIZE

The prize is given to the best graduate from each faculty. The prize consists of cash and a certificate.

THE ACADEMIC PRIZE

The prize is given to the best graduate for each programme in each faculty. The prize is contributed by Statutory and Professional Bodies and Private Companies. The prize consists of cash, a medal and a book or Certificate of Appreciation.

THE DEAN'S LIST

A student who obtains a GPA 3.67 and above will be awarded a Dean's List Certificate, if he/she has registered for at least 12 credit hours for that semester excluding courses with HS and HW status. The remark "Dean's List" will be printed on the student's transcript.

OUR UNIQUENESS

1. Bachelor in Artificial Intelligence with Honours in UTM focusing more 70% of AI compared with the other AI programs in Malaysia Public University.

2. The elective course offered encompassing the main areas of AI. These electives are categorized into four (3) clusters which are AI Advanced Algorithm, Applied AI, AI Robotic and Automation and AI in Business.

3. Three (3) Years Program with only 121 total credits.

4. Industry Infused curriculum through Final Year Project and Industrial Training.

5. Students are given the opportunity to experience studying abroad through various programmes organized by the Faculty / University. Programmes such as the Global Outreach Programmes (GOP), services learning and student exchange are highly sought after by students who want to broaden their knowledge and prepare themselves for the global market.
